EDUCATION

HO CHI MINH CITY UNIVERSITY OF TECHNOLOGY

Information Technology, Software Engineer, GPA: 3.52/4

Ho Chi Minh

2018-2022

SUMMARY

Unity Developer with 3 years of hands-on experience in mobile game development. Strong background in gameplay programming, game architecture, and performance optimization. Passionate about delivering meaningful and polished game experiences. Proactive, adaptable, and eager to grow into a Senior Developer role by contributing to impactful projects and learning from talented teams.

SKILLS

Programming Languages: C#.

Game Engine: Unity.

Architecture & Principles: OOP, SOLID, MVC, Design Patterns (Singleton, Observer, Factory).

Tools & SDKs: Spine, Firebase, PlayFab, Photon, IAP, Mediation, Sentry, DoTween.

Optimization: Memory & Asset Management, Performance Tuning.

Version Control: Git (SourceTree, Fork).

Workflow: Scrum, Jira.

Others: Figma, Mixamo.

EXPERIENCE

FREELANCER

2024 - Present

KNIGHT SURVIVOR

02-2026

Position: Unity Developer

Platform: Android

A fast-paced 2D roguelike survival game inspired by Vampire Survivors, where players fight against massive enemy hordes, evolve weapons, build powerful synergies, and survive increasingly difficult waves and bosses.

Knight Survivor is a system-heavy roguelike project focused on scalable combat architecture, modular weapon design, and large-scale enemy swarm gameplay. As a solo developer, I was responsible for the entire development lifecycle, including gameplay programming, combat architecture, progression systems, enemy AI, balancing pipelines, performance optimization, and release management.

Responsibility:

- Implemented 30+ active/evolved weapons with unique attack behaviors including AoE, piercing, orbiting, homing, bounce, and damage-over-time mechanics.
- Built a roguelike progression system with randomized upgrades, stackable passive effects, weapon evolutions, and scalable runtime stat calculations.
- Designed dynamic enemy spawning systems featuring density scaling, wave milestones, elite enemies, boss encounters, and endless stage progression.
- Created modular combat and skill systems using data-driven configurations for rapid balancing and scalable content production.
- Optimized large-scale combat scenarios through object pooling, controlled update cycles, and efficient enemy lifecycle management, ensuring stable performance on mobile devices.

TOWER DEFENSE

10-2025

Position: Unity Developer

Platform: Android

A mobile lane-defense game combining hero management, tower defense, layered progression systems, and real-time combat against large enemy waves and bosses.

A solo-developed strategy defense project focused on scalable gameplay systems, layered progression mechanics, and modular combat architecture. I implemented hero systems, tower systems, upgrade mechanics, enemy waves, boss encounters, and gameplay balancing.

Responsibility:

- Implemented a hero combat system featuring 7 unique heroes with different attack behaviors, combat roles, and upgrade progression.
- Built a modular tower system with 5 different tower types providing unique combat utilities and battlefield control mechanics.
- Developed an upgradeable skill system containing 8 player skills with scalable progression and combat-enhancing effects.
- Designed layered progression systems for castle upgrades, heroes, towers, statues, and player skills to support long-term gameplay growth.
- Implemented passive statue systems providing permanent combat bonuses and strategic stat enhancements.
- Built scalable gameplay architecture handling combat interactions, projectile systems, damage calculations, upgrades, and runtime balancing.

ATHENA STUDIO

SOLITAIRE MONUMENT: HAPPY TRIP

10/2022-10/2023

Position: Unity Developer

Platform: Android

Responsibilities:

- Built new gameplay mechanics and refined existing systems.
- Developed mini-games: Monopoly-style gameplay, battle pass, mission system.
- Collaborated closely with Designers, Artists, VFX, and QA to finalize game features.
